'Your best course is to work through a book such as William Tang's *Spectrum Machine Language For The Absolute Beginner*.

'This book is one of the best I have seen on the subject — for once the title is right on the nose! I can recommend this to anyone just getting interested.' — Popular Computing Weekly.

If you are are frustrated by the limitations of BASIC and want to write faster, more powerful, space-saving programs or subroutines, then *Spectrum Machine Language For The Absolute Beginner* is the book for you.

Even with no previous experience of computer languages, you will be able to discover the ease and power of the Spectrum's own language. Each chapter includes specific examples of machine language applications which can be demonstrated and used on your Spectrum, as well as a self-test questionnaire.

At the end of the book, all this is brought together into an entire machine language program — from design right through to the complete listing of an exciting, original arcade game.
